

BEN GURION AIRPORT

TEL AVIV, ISRAEL

PROJECT SUMMARY

Construction of the new Ben Gurion Airport in Tel Aviv was a massive, logistically complex and politically sensitive endeavor, requiring a high degree of coordination between an international array of contractors and designers.

SOLUTION

Our design team developed many hundreds of details for the waterproofing and roofing contractors, both Israeli and Turkish, for the Landside and Airside Terminals and the Parking Garage. Our contract administration team closely assisted our clients' product specification and costing processes, produced numerous Submittal and RFI packets, and coordinated container shipments to Israel from throughout North America and Europe.

During critical periods in the installation of key waterproofing systems, our field personnel have traveled to Israel for extended supervision of the work.
