

## PORTLAND ART MUSEUM

PORTLAND, OREGON

### PROJECT SUMMARY

When the roofs began leaking at the Pacific Northwest's oldest art museum, potentially jeopardizing its valuable collections and precious works of art, the managers of the Portland Art Museum called us.

### SOLUTION

We investigated 32 different roof systems constructed with different products and experiencing unique conditions, and determined the leaks were caused by flashing and masonry deficiencies. We designed new flashing and roofing assemblies to tie into existing systems during the ongoing renovations.
